Nitro Cans

Nitro Cans

The Nitro Can is a beverage can that contains a 'widget' fixed to the can base. When the can is opened, a unique ssshhhh sound is heard indicating that the widget has been activated and is releasing small nitrogen bubbles into the beverage. This creates the 'cascading' effect and a creamy foam top layer when the beverage is poured into a glass.

In-can widget offers nitro beverage lovers a compelling off-trade drinks experience!
